Continuation of 3. NOTE: The claims as amended constitute subject matter that would necossitate a new search that includes the combination of claims with the plurality of compound semiconductor layers including a high concentration carrier layer of a first conductive type, a light absorbing layer of the first conductive type, and a cap layer of the first conductive type, wherein the photodetecting region is a region of a second conductive type including at least a part of the cap layer, wherein the multilayer structure further comprises a depression formed the photodetecting region, and a writing electrode arranged within the depression, wherein the electrode part of the first electrode electrically connects the first electrode to the second electrode through the writing electrode arranged within the depression, and wherein the third electrode is electrically connected to a part positioned near the photodetecting region in the high concentrol carrier layer.
